Penelitian ini bertujuan untuk mengetahui : (1) pengaruh positif praktik berwirausaha dalam mata kuliah kewirausahaan terhadap minat berwirausaha; (2) pengaruh pekerjaan orang tua terhadap minat berwirausaha.

Penelitian ini bertempat di Universitas Sanata Dharma, Jl. Mrican, Tromol Pos 29. Pelaksanaan penelitian pada tanggal 11 November -10 Desember 2011. Populasi dalam penelitian ini adalah mahasiswa yang telah mengikuti mata kuliah kewirausahaan tahun akademik 2010/2011 dan 2011/2012. Jumlah populasi adalah 129 mahasiswa. Jumlah sampel penelitian adalah 100 mahasiswa. Teknik pengambilan sampel yang digunakan adalah *stratified proportionate random sampling*. Teknik analisis data yang digunakan adalah *Chi Square*.

Hasil penelitian menunjukkan bahwa : (1) ada pengaruh positif praktik berwirausaha dalam mata kuliah kewirausahaan terhadap minat berwirausaha. Hal ini didukung *Chi Square* hitung \geq *Chi Square* tabel ($92.618 \geq 21.026$). (2) tidak ada pengaruh positif pekerjaan orang tua terhadap minat berwirausaha. Hal ini didukung *Chi Square* hitung \leq *Chi Square* tabel ($5.737 \leq 9.488$) untuk pekerjaan Ayah dan *Chi Square* hitung \leq *Chi Square* tabel ($3.296 \leq 9.488$) untuk pekerjaan Ibu.

ABSTRACT

**THE INFLUENCE OF THE PRACTICE OF ENTERPRENEURSHIP IN
ENTERPRENEURSHIP COURSES AND PARENTS' OCCUPATION
TOWARDS THE INTEREST OF ENTERPRENEURSHIP**

A Case Study: Students of Accounting Education Study Program, who have been taking courses in entrepreneurship

This study aims to know: (1) the influence of the practice of entrepreneurship in entrepreneurship courses on entrepreneurship interest, (2) the influence of the type of parents' occupation towards the interest entrepreneurship.

This study took place at the University of Sanata Dharma Yogyakarta, Jl. Mrican, Post Code 29. This study was carried out from 11th November-10th Desember 2011. The population this study were students who had attended entrepreneurship courses in 2010/2011 and 2011/2012 academic year. The population of the study were 129 students. The sampels were 100 students. The sampling technique was stratified proportionate random sampling. Data analysis technique was Chi Square.

The results show that: (1) There is influence in the practice of entrepreneurship in entrepreneurship courses on entrepreneurship interest. This is supported by Chi Square table count ($92.618 \geq 21.026$). (2) There is no influence of type of parents' occupation towards the interest of entrepreneurship. This is supported by Chi Square table count ($5.737 \leq 9.488$) for the type of fathers' occupation and Chi Square table count ($3.296 \leq 9.488$) for the type of mothers' occupation.
