

PERBEDAAN TINGKAT *EMPLOYABILITY* ANTARA SISWA SEKOLAH MENENGAH KEJURUAN (SMK) DI KOTA DAN DESA

Francisca Rahmadita Dewi
NIM: 139114086

ABSTRAK

Penelitian ini bertujuan untuk mengetahui perbedaan tingkat *employability* antara siswa Sekolah Menengah Kejuruan (SMK) di kota dan desa. Hipotesis dalam penelitian ini adalah ada perbedaan tingkat *employability* yang signifikan antara siswa SMK di kota dan desa. Subjek dalam penelitian ini sebanyak 211 siswa yang terdiri dari 112 siswa SMK di desa dan 99 siswa SMK di kota. Alat pengumpulan data dalam penelitian ini menggunakan skala *employability* dalam bentuk skala *likert* yang dikembangkan oleh peneliti. Reliabilitas skala penelitian ini menggunakan koefisien reliabilitas *Alpha Cronbach* sebesar 0,864. Teknik analisis data menggunakan uji *Mann Whitney U Test*. Hasil penelitian diperoleh nilai signifikansi sebesar 0,410 ($p > 0,05$) yang artinya tidak ada perbedaan tingkat *employability* yang signifikan antara siswa SMK di kota dan desa.

Kata kunci: *employability*, siswa, sekolah menengah kejuruan, kota, desa

THE DIFFERENCE IN EMPLOYABILITY LEVEL BETWEEN VOCATIONAL HIGH SCHOOL STUDENTS IN CITY AND COUNTRYSIDE

Francisca Rahmadita Dewi

NIM: 139114086

ABSTRACT

This research aims to find out the differences in employability level between the students of vocational high schools in the city and countryside. The hypothesis of this research is there are significant differences in employability level between the students of vocational high schools in the city and countryside. The participants of this research are 211 students. They are comprised of 112 vocational high school students in the countryside and 99 vocational high school students in the city. The data gathering instrument is employability scale for likert-type scale which is modified by the researcher. The reliability scale of this research uses Cronbach's Alpha reliability coefficient ($\alpha = 0.864$). The data analysis technique uses Mann Whitney U Test. The result shows a significant number as 0.410 ($p > 0.05$) which means there is no significant difference in employability level between the students of vocational high schools in the city and countryside.

Keywords: employability, student, vocational high school, city, countryside
