Kata kunci : remaja, Spearman Rank Row, perilaku agresi remaja pengguna media sosial, pola asuh otoriter.

THE RELATION OF AUTHORITARIAN PARENTING WITH INTENTION AGGRESSION BEHAVIOR IN ADOLESCENCE AS SOCIAL MEDIA USERS

Emmanuel Maria Magdalena

ABSTRACT

Parents had opinion about their own parenting and applied it as the best thing and the most effective way to educate their children. Parents with dominant role would result to a rebel child. Nowadays, technology development also supported adolescence's needs of external affection or from social media and they also proved it. This research is aimed to know the authoritarian parenting toward aggressivity that shown from status in adolescence's social media. This research used quantitative technique with scale as instrument. Two scales presented were aggressivity scale and authoritarian parenting scale. Aggressive behavior in this research found social media with frequency on changing and writing status with violence elements. This behavior were connected with authoritarian parenting where authoritarian parenting for adolescence would influence them to do aggressive action in social media. Based on the Spearman correlation test result, it was found that correlation coefficient (r) 0,065 with significant value 0,230. From 132 adolescent, there were 77 adolescent who accepted authoritarian parenting with low intencity. Meanwhile 3 adolescent accepted autotitarian parenting with high intencity. This research also showed adolescence ageressivity bahavior in social media were 90 adolescence a did agresion in medium category. However, there were 8 adolescence a did aggression with high category. In the end, there were relation between authoritarian parenteng with aggressive behavior.
