

## HUBUNGAN ANTARA KUALITAS PERKAWINAN DAN INTENSI BERSELINGKUH PADA PERNIKAHAN

*Bernadetta Febyana Herlanda*

### ABSTRAK

Tujuan penelitian ini adalah untuk mengetahui hubungan antara kualitas perkawinan dan intensi berselingkuh. Hipotesis dalam penelitian ini yaitu adanya hubungan negatif yang signifikan antara kualitas perkawinan dan intensi berselingkuh. Subjek dalam penelitian ini adalah individu yang sudah menikah dan tinggal bersama di berbagai kota. Jumlah subjek yaitu sebesar 77 orang. Pengambilan data dilakukan dengan penyebaran skala kualitas perkawinan dengan reliabilitas sebesar ( $\alpha$ ) = 0,924 dan skala intensi berselingkuh dengan reliabilitas sebesar ( $\alpha$ ) = 0,753. Teknik analisis data pada penelitian ini menggunakan uji korelasi *Spearman's rho* melalui aplikasi *SPSS for Windows* versi 16.0. karena sebaran data dari variabel kualitas perkawinan dan intensi berselingkuh tidak normal. Hasil menunjukkan bahwa terdapat hubungan negatif dan signifikan sebesar (-0,505) dengan nilai  $p = 0,000$  ( $p < 0,05$ )

**Kata kunci :** kualitas perkawinan, intensi berselingkuh, pernikahan

## ***THE RELATIONSHIP BETWEEN THE QUALITY OF MARRIAGE AND INTENTION OF INFIDELITY IN MARRIAGE***

***Bernadetta Febyana Herlanda***

### ***ABSTRACT***

*The purpose of this study is to discover relationship between marriage quality and intention of infidelity. The hypothesis in this research is the existence of a significantly bad relationship between marriage quality and intention of infidelity. The subjects in this study are, married man and woman whose stay on various cities. The number of subjects is 77 people. The data were collected by spreading the quality scale of marriage with reliability ( $\alpha$ ) = 0,924 and spreading the scale of infidelity intentions with reliability ( $\alpha$ ) = 0,753. Spearman's rho correlation test was the data analysis technique that being used in this study with help of an application, SPSS for Windows Version 16.0. Spearman's rho correlation test was used because the data distribution from variables marriage quality and intention of infidelity wasn't normal. The results showed that a significantly bad relationship between marriage quality and intention of infidelity is exist on value (-0,505) with p value = 0,000 ( $p < 0,05$ )*

***Keywords :*** *marriage quality, intention of infidelity, marriage*
