**ABSTRAK**

Penelitian ini bertujuan untuk menguji hubungan antara dimensi *extraversion* dan *openness to experience* dalam kepribadian *big five* dengan kecenderungan remaja melakukan *cyberbullying*. Penelitian hanya berfokus pada dua dimensi yaitu *Extraversion* dan *Openness to Experience*. Subyek dalam penelitian ini berjumlah 160 orang yang berasal dari siswa sekolah menengah pertama dan siswa sekolah menengah atas, dengan rincian 96 remaja perempuan dan 64 remaja laki-laki. Metode pengumpulan data menggunakan skala kepribadian *big five* dari IPIP (*international Personality Item Pool*) yang disusun oleh Goldberg dan skala *cyberbullying* dari Mawardah. Reliabilitas pada skala kepribadian *big five* sebesar 0,832 dan skala *cyberbullying* sebesar 0,951. Hasil analisis data menunjukkan bahwa kepribadian *big five* berhubungan negatif dengan kecenderungan remaja melakukan *cyberbullying* ( $\beta = -0,251$  ;  $p = 0,001$ ), dimensi *Extraversion* tidak berhubungan dengan kecenderungan remaja melakukan *cyberbullying* ( $\beta = -0,026$  ;  $p = 0,373$ ) dan *Openness to Experience* berhubungan negatif dengan kecenderungan remaja melakukan *cyberbullying* ( $\beta = -0,211$  ;  $p = 0,004$ ).

**Kata kunci :** kepribadian *big five*, *extraversion*, *openness to experience*, *cyberbullying*

**THE CORELATION BETWEEN EXTRAVERSION AND OPENNESS TO  
EXPERIENCE DIMENSIONS IN BIG FIVE PERSONALITY AND THE  
CYBERBULLYING TENDENCY  
OF TEENAGERS**

***Abstract***

The aim of this research was examine the relationship between extraversion and openness to experience dimensions in big five personality and cyberbullying tendency of teenagers. This study was focused just on two dimensions. There is the were extraversion and openness to experience. The subjects of this research were about 160 teenagers from junior and senior high school in Yogyakarta, 96 female teenagers and 64 male teenagers. The researcher used big five personality scale from IPIP (International Personality Item Pool) compiled by Golberg and cyberbullying scale from Mawardah to collect the datas. The reliability of big five personality scale was 0,832 and cyberbullying scale was 0,951. The result showed that the big five personality had a negative correlation with cyberbullying tendency of teenagers ( $\beta = -0,251$  ;  $p = 0,001$ ), extraversion didn't have significant correlation with the cyberbullying tendency of teenagers ( $-0,026$  ;  $p = 0,373$ ) and openness to experience had negative correlation with the cyberbullying tendency of teenagers ( $\beta = -0,211$  ;  $p = 0,004$ ).

Keywords : big five personality, extraversion, openness to experience, cyberbullying
