

ABSTRACT

Pharmacist is a health professional that is approved by government as pharmaceutical professional. Pharmacy can be called as a health professional because it has oath and ethic code as its job anvil, monopoly of practice, special knowledge and skill in pharmaceutical, and service orientation. Professional pharmacist do the job based on oath, ethic code, standard of profession, and the laws. On pharmacist's ethic code, a pharmacist have to respects the covenantal relationship between the patient and pharmacist, acts with honesty and integrity, and respect the values and abilities of colleagues or other health professional.

This research aimed to know the relationship between interpretation of pharmacist's oath and ethic code, and pharmacist's professionalism in Yogyakarta. The relationship is showed by pharmacist's presence in pharmacy, pharmacist's service to the patient, counseling service, promotion, education, and home care, and the relationship between pharmacist and colleagues or other health professional. The type of the research is observational. Questionnaires distributed to the 40 pharmacists in Yogyakarta were used as data sources. Data was analyzed using correlation technique called *Pearson Product Moment* with level degree of trust by 95%.

Result of the research suggested that there was positive relationship ($r=0,497$) and significant ($p< 0,05$) between interpretation of pharmacist's oath and ethic code, and pharmacist's professionalism in Yogyakarta and the relationship was average.

Keywords: relationship, interpretation of pharmacist's oath and ethic code, pharmacist's professionalism.
