2003

Penelitian ini bertujuan untuk mengetahui apakah: (1) ada hubungan antara NEM SLTP dengan minat siswa memilih jurusan di SMU; (2) ada hubungan antara prestasi belajar siswa dengan minat siswa memilih jurusan di SMU; (3) ada hubungan antara tingkat pendidikan orang tua dengan minat siswa memilih jurusan di SMU; (4) ada hubungan antara jenis pekerjaan orang tua dengan minat siswa memilih jurusan di SMU.

Penelitian ini dilaksanakan di SMU Negeri 1 Depok Yogyakarta. Jumlah sampel penelitian ini adalah sebanyak 60 orang siswa kelas II (dua). Pengumpulan data dilakukan dengan menggunakan kuesioner dan disampaikan secara langsung kepada siswa kelas II (dua). Teknik analisis data dilakukan dengan menggunakan *Chi Square*.

Hasil penelitian menunjukkan bahwa: (1) ada hubungan antara NEM SLTP dengan minat siswa memilih jurusan di SMU ( $\chi^2 = 19,28 > \chi^2 \text{ tabel} = 3,841$  pada taraf signifikansi = 0,05 dan df = 1) tinggi hubungan NEM SLTP dengan minat siswa memilih jurusan di SMU (Cmaks) adalah 0,49; (2) ada hubungan antara prestasi belajar siswa dengan minat siswa memilih jurusan di SMU  $\chi^2 = 9,8 > \chi^2 \text{ tabel} = 3,841$  pada taraf signifikansi = 0,05 dan df = 1) tinggi hubungan prestasi belajar siswa dengan minat siswa memilih jurusan di SMU (Cmaks) adalah 0,37; (3) ada hubungan antara tingkat pendidikan orang tua dengan minat siswa memilih jurusan di SMU  $\chi^2 = 27,39 > \chi^2 \text{ tabel} = 3,841$  pada taraf signifikansi = 0,05 dan df = 4) tinggi hubungan tingkat pendidikan orang tua dengan minat siswa memilih jurusan di SMU (Cmaks) adalah 0,55; (4) ada hubungan antara jenis pekerjaan orang tua dengan minat siswa memilih jurusan di SMU  $\chi^2 = 10,3 > \chi^2 \text{ tabel} = 3,841$  pada taraf signifikansi = 0,05 dan df = 4) tinggi hubungan jenis pekerjaan orang tua dengan minat siswa memilih jurusan di SMU (Cmaks) adalah 0,38.

## ABSTRACT

### **THE RELATIONSHIP BETWEEN JUNIOR HIGH SCHOOL STATE FINAL EXAMINATION GRADE, STUDENTS' LEARNING ACHIEVEMENT, PARENTS' EDUCATIONAL DEGREE AND KINDS OF OCCUPATION ASSOCIATED WITH STUDENTS' INTEREST IN CHOOSING THE DEPARTMENT OF SENIOR HIGH SCHOOL.**

This research was aimed to find out the relationship between: (1) Junior High School state final examination grade and students' interest in choosing the department of Senior High School; (2) students' learning achievement and students' interest in choosing the department of Senior High School; (3) parents' educational degree and students' interest in choosing the department of Senior High School; (4) parents' kinds of occupation and students' interest in choosing the department of Senior High School.

The population of this research was the second year students of Senior High School (SMU) "Negeri 1" Depok Yogyakarta registered 2001/2002 academic year. It consisted of 60 students. The data was obtained through questionnaire given to the second year of students directly. Chi Square was used to analyze the obtained data.

The result of the data analysis showed that: (1) there was a relationship between Junior High School state final examination grade and students' interest in choosing the department of Senior High School ( $\chi^2 = 19,28 > \chi^2_{\text{table}} = 3,841$  at the significance level of 0,05 and  $df = 1$ ). The value of the relationship between Junior High School state final examination grade and students' interest in choosing the department of Senior High School (C maks) was 0,49; (2) there was a relationship between students' learning achievement and students' interest in choosing the department of Senior High School ( $\chi^2 = 9,8 > \chi^2_{\text{table}} = 3,841$  at significance level of 0,05 and  $df = 1$ ). The value of the relationship between students' learning achievement and students' interest in choosing the department of Senior High School (C maks) was 0,37; (3) there was a relationship between parents' educational degree and students' interest in choosing the department of Senior High School ( $\chi^2 = 27,39 > \chi^2_{\text{table}} = 3,841$  at the significance level of 0,05 and  $df = 4$ ). The value of the relationship between parents' educational degree and student' interest in choosing the department of Senior High School (C maks) was 0,55; (4) there was a relationship between parents' kinds of occupation and students' interest in choosing the department of Senior High School ( $\chi^2 = 10,3 > \chi^2_{\text{table}} = 3,841$  at the significance level of 0,05 and  $df = 4$ ). The value of the relationship between parents' kinds of occupation and students' interest in choosing the department of Senior High School (C maks) was 0,38.
