This research aims at knowing the characteristics of inpatients and priority of service which includes physician's service, nurse's service, administration's service, medical equipment and ward facilities, and also the attitude of inpatients toward the service of the inpatient care.

This research is a case study using methods of data collection of questionnaire and documentation. The samples taken in this research are 100 patients. Data analysis uses an analysis of percentage, an analysis of priority of interest and the Analysis of Multiattribute Attitude Model (MAM).

The results of this research showed that the percentage of the male and female patients are of 50% and 50%. The patients were more than 35 years old (49%), of Senior High School of educational background (31%), of private employees (31%) and with monthly income of more than IDR 700.000 (70%). The results of order of priority in lodging care service are the physician's service, nurse's service, medical equipment, facilities of ward and administration service. Meanwhile, the attitude of inpatients toward the lodging care service in General Regional Hospital of Sanggau Regency is "very satisfied".
