

ABSTRACT

The progress of technology of internet especially www has been so speedy now. It does display only texts, but it can be pictures, sounds and vivid pictures also. In addition, it can be added by programming language that is specified for web such as Java, Javascript, VBScript which makes web page become more interactive.

In the later progress, people then produce ASP (Active Server Pager) which is a server technology that makes a dynamic and interactive web page on WWW site or relating to internet.

In this care, technology, of ASP will be applied to make an information system that manipulates data-basis taken from Panti Rapih Hospital in Yogyakarta.

By using this facility, the users will be able to search the patients data and they will be easily register the patients who are from far away.
