Tujuan dari penelitian ini adalah untuk menganalisis perbedaan pola konsumsi, jumlah tabungan, dan tingkat penghasilan penambang minyak tradisional di Desa Wonocolo dan Desa Hargomulyo, Kecamatan Kedewan, Bojonegoro, Jawa Timur.

Penelitian ini termasuk jenis penelitian studi komparatif, dilaksanakan pada bulan November 2014. Populasi dalam penelitian ini adalah seluruh masyarakat di daerah Desa Wonocolo dan Desa Hargomulyo, Kecamatan Kedewan, Bojonegoro. Teknik pengambilan sampel dilakukan secara *random sampling* berjumlah 96 responden dan pengumpulan data dengan menggunakan alat bantu kuesioner. Teknik analisis data menggunakan *Independent Sample t-test*.

Hasil penelitian ini menunjukkan bahwa: (1) terdapat perbedaan pola konsumsi dengan nilai rata-rata selisih sebesar 1,56 pada penambang minyak tradisional di Desa Wonocolo (7,31) dan Desa Hargomulyo (5,75) dengan (nilai sig. 0,000 < 0,05), (2) terdapat perbedaan jumlah tabungan dengan nilai rata-rata selisih sebesar Rp. 558.334,00 pada penambang minyak tradisional mobil di Desa Wonocolo (Rp. 2.019.792,00) dan Desa Hargomulyo (Rp. 1.461.458,00) dengan (nilai sig. 0,002 < α = 0,05), dan (3) tidak terdapat perbedaan tingkat penghasilan penambang minyak tradisional di Desa Wonocolo dan Desa Hargomulyo (nilai sig. 0,718 > α = 0,05).

ABSTRACT

**THE COMPARATIVE STUDY OF CONSUMPTION, TOTAL SAVINGS,
AND LEVELS INCOME OF TRADITIONAL OIL MINERS IN THE
WONOCOLO VILLAGE AND HARGOMULYO VILLAGE, KEDEWAN
DISTRICT, BOJONEGORO,
EAST JAVA**

The purpose of this study is to analyze the differences in consumption patterns, the amount of savings, and income levels in the miners traditional oil in Wonocolo Village and Hargomulyo Village, Kedewan District, Bojonegoro, East Java.

This research is a comparative study, carried out in November 2014. The population of this study were the people in the Village of Wonocolo and Hargomulyo, Kedewan District, Bojonegoro. The samples were 96 respondents. The technique of taking samples was random sampling. The technique of data collection was a questionnaire. Data were analyzed by using independent sample t-test.

The results show that: (1) there are differences in the consumption patterns of traditional oil miners in Wonocolo Village. They are more consumptive than the Village of Hargomulyo (sig. 0.000 < 0.05), (2) there are differences in the amount of savings with the different average value Rp. 558,334.00 on traditional oil miners in the Village of Wonocolo (Rp. 2,019,792.00), and the Hargomulyo Village (Rp. 1,461,458.00) with (sig. 0.002 < $\alpha = 0.05$), and (3) there are no differences in the level of income of traditional oil miners in the Village of Wonocolo and Hargomulyo (sig. 0.718 > $\alpha = 0.05$).
