

HUBUNGAN ANTARA TEKANAN TEMAN SEBAYA DENGAN AGRESI VERBAL REMAJA PUTRA DI SEKOLAH BERASRAMA

Yohana Desy Dwina Hapsari

ABSTRAK

Penelitian ini bertujuan untuk mengetahui hubungan antara tekanan teman sebaya dengan agresi verbal pada remaja putra di sekolah berasrama. Hipotesis pada penelitian ini adalah adanya hubungan positif antara tekanan teman sebaya dengan agresi verbal remaja putra di sekolah berasrama. Penelitian ini dilakukan di sebuah sekolah berasrama SMA Pangudi Luhur Van Lith Muntilan dengan subjek berjumlah 177 siswa yang berusia 15 sampai 16 tahun. Alat pengumpulan data yang digunakan ialah skala tekanan teman sebaya dan skala agresi verbal. Skala tekanan teman sebaya memiliki 20 item dengan koefisien reliabilitas $\alpha = 0,738$ dan skala agresi verbal memiliki 24 item dengan koefisien reliabilitas $\alpha = 0,742$. Teknik analisis data menggunakan uji korelasi *Spearman's Rho* data pada kedua variabel tidak normal namun linear. Penelitian ini menghasilkan nilai korelasi sebesar $r = 0,528$ dan nilai signifikansi $p = 0,00 < 0,05$. Hasil ini menunjukkan adanya hubungan positif dan signifikan antara tekanan teman sebaya dan agresi verbal. Hal itu berarti semakin tinggi tingkat tekanan teman sebaya, maka semakin tinggi agresi verbal pada remaja putra di sekolah berasrama.

Kata kunci : tekanan teman sebaya, agresi verbal, remaja putra.

THE CORRELATION BETWEEN PEER PRESSURE AND VERBAL AGGRESSION ON MALE ADOLESCENT IN BOARDING SCHOOL

Yohana Desy Dwina Hapsari

ABSTRACT

This research aimed to know the correlation between peer pressure and verbal aggression on male adolescents in boarding school. The hypothesis was that there was a positive relationship between peer pressure and verbal aggression on male adolescents in boarding school. This research was held in Pangudi Luhur Van Lith boarding senior high school with subject in this research were 177 male students aged 15 to 16 years old. Data instruments used were the scale of peer pressure and verbal aggression. The scale of peer pressure had 20 items with the reliability coefficient of $\alpha = 0,738$ and the scale of verbal aggression had 24 items with the reliability coefficient of $\alpha = 0,742$. The technique of data analysis being used was Spearman's Rho correlation test because data on both variables were not normal but linear. This research showed that the value of Spearman's Rho correlation test was $r = 0,528$ with significance level $p = 0,000 < 0,05$. The result indicated a positive and significant correlation between peer pressure and verbal aggression on male adolescents in boarding school. It means that the higher the level of peer pressure, the higher the level of verbal aggression in male adolescents in boarding school.

Keyword : peer pressure, verbal aggression, male adolescent.
