

**HUBUNGAN ANTARA PSYCHOLOGICAL SENSE
OF COMMUNITY DAN SPIRITUAL WELL-BEING
PADA UMAT KATOLIK
DI PAROKI ST. PIUS X KARANGANYAR**

Yustinus Phoebe Setiawan

ABSTRAK

Penelitian ini bertujuan untuk mengetahui hubungan antara *psychological sense of community* dan *spiritual well-being* pada umat Katolik di Paroki St. Pius X Karanganyar dengan menggunakan desain korelasional. Hipotesis penelitian ini adalah terdapat hubungan positif antara *psychological sense of community* dan *spiritual well-being*. Subjek penelitian ini sejumlah 278 orang dari 41 lingkungan dengan rentang usia 25-75 tahun. Data dikumpulkan dengan kuesioner hasil adaptasi dari *Sense of Community Index-2* yang memiliki 24 item ($\alpha = 0,926$) dan *Spiritual Health And Life Orientation Measure* yang memiliki 20 item ($\alpha = 0,985$). Hasil penelitian ini menunjukkan tingkat *psychological sense of community* dan *spiritual well-being* subjek penelitian ini cenderung tinggi. Kemudian, terdapat hubungan positif dan signifikan antara *psychological sense of community* dan *spiritual well-being* pada umat Katolik di Paroki St. Pius X Karanganyar, meskipun hubungan tersebut tergolong lemah, $r = 0,187$, $p = 0,001$, $p < 0,05$. Penelitian ini juga menunjukkan tidak ada perbedaan *spiritual well-being* berdasarkan tiga kategori usia perkembangan iman orang dewasa. Hasil penelitian ini mendukung kebijakan Gereja tentang pentingnya umat berpartisipasi di dalam lingkungan.

Kata kunci: *psychological sense of community*, *spiritual well-being*, umat Gereja Katolik, kuantitatif korelasional.

**THE RELATIONSHIP BETWEEN PSYCHOLOGICAL
SENSE OF COMMUNITY AND SPIRITUAL WELL-BEING
AMONG CATHOLICS
AT ST. PIUS X PARISH KARANGANYAR**

ABSTRACT

The purpose of this study was to determine whether there is a relationship between psychological sense of community and spiritual well-being among Catholics at St. Pius X Parish Karanganyar by using a correlational design. This study hypothesized that there is a positive relationship between psychological sense of community and spiritual well-being. Participants this study were 278 adults from 41 Catholic communities with age ranging from 25 to 75 years. The data were collected using a questionnaire adapted from the Sense of Community Index-2 which has 24 items ($\alpha = 0,926$) and Spiritual Health And Life Orientation Measure which has 20 items ($\alpha = 0,985$). The results of this study indicate that the level of psychological sense of community and spiritual well-being of the research subjects tends to be high. Then, there is a positive and significant relationship between psychological sense of community and spiritual well-being among Catholics at St. Pius X Parish Karanganyar, although the relationship is relatively weak, $r = 0,187$, $p = 0,001$, $p < 0,05$. The results of this study also indicate that there is no difference in spiritual well-being based on the three age categories of adult faith development. The results of this study support the Church's policy on the importance of parishioner's participation in the Catholic community.

Keyword: *psychological sense of community, spiritual well-being, Catholics, a correlational quantitative.*
