

PERBEDAAN PERILAKU SEKSUAL REMAJA DI SEKOLAH HOMOGEN DAN HETEROGEN

Ursula Kanindya Chrysanthea

ABSTRAK

Penelitian ini bertujuan untuk melihat perbedaan perilaku seksual remaja di sekolah homogen dan heterogen. Hipotesis awal adalah ada perbedaan perilaku seksual remaja di sekolah homogen dan remaja di sekolah heterogen. Di mana perilaku seksual remaja di sekolah heterogen lebih tinggi dari pada perilaku seksual remaja di sekolah homogen. Subjek dalam penelitian ini berjumlah 140 orang yang terdiri dari remaja di sekolah homogen laki-laki dan perempuan serta remaja di sekolah heterogen. Penelitian ini menggunakan skala perilaku seksual sebagai alat ukur, yang dibuat sendiri oleh penulis. Reliabilitas skala perilaku seksual yang didapatkan sebesar 0,816. Analisis data dilakukan dengan menggunakan *Nonparametric Mann-Whitney U*. Hasil *Mann-Whitney U* menunjukkan spesifikasi $p=0,000 < 0,05$ maka ada perbedaan pada perilaku seksual remaja di sekolah homogen dan heterogen. Kemudian jika dilihat dari mean yang dimiliki setiap kelompok, sekolah homogen memiliki mean sebesar 5,74 dan sekolah heterogen sebesar 13,03 menandakan bahwa remaja di sekolah heterogen memiliki perilaku seksual yang lebih tinggi dibandingkan dengan di sekolah homogen. Kesimpulannya ada perbedaan perilaku seksual remaja, di sekolah homogen dan heterogen.

Kata Kunci :Perilaku seksual, remaja, sekolah, homogen, heterogen

**THE DIFFERENCE OF SEXUAL BEHAVIOUR ON ADOLESCENCE IN
HOMOGENY SCHOOL AND HETEROGEN SCHOOL**

Ursula Kanindya Chrysanthea

ABSTRACT

This study was aimed to see differences in adolescence sexual behavior in homogeneous and heterogeneous school. Early hypothesis was conclusion there were differences for the adolescence sexual behavior in homogeneous and heterogeneous school. Initial hypothesis was that sexual behavior of adolescence in the heterogeneous school was higher than in the homogeneous school. The subjects of this study were 140 people consisting of adolescence in homogeneous school-boys and girls as well as adolescence in heterogeneous school. This study used the measurement of sexual behavior which was made by the author herself. The reliability of sexual behavior measurement obtained was 0.816. The data was analysed using Nonparametric Mann-Whitney U. The result of Mann-Whitney U indicated the specification of $p = 0.000 < 0.05$ then there was the difference in the sexual behavior of adolescence in the homogeneous and heterogeneous school. Furthermore, if we saw from the maean owned by each group, homogeneous school had mean 5,74 and heterogeneous school by 13,03 which indicated that adolescence of heterogeneous school had higher sexual behavior than in homogeneous school. In conclusion there were differences for adolescence sexual behavior in homogeneous and heterogeneous school.
