The objectives of this research were to know: (1) the customers' attitudes toward the cellular phone attributes of "NOKIA"; (2) whether or not there was any difference of the customers' attitudes toward the "NOKIA" attributes based on their educational level, occupation status and income level; and (3) the most influential attribute for the users of "NOKIA".

This research was conducted in Karangwaru subdistrict, Yogyakarta during March 2005. The sample of 100 respondents was taken by using accidental sampling technique. An analysis of Multi Attribute Attitude Model was used to answer the first problem, an analysis of chi-square for the second problem and an analysis of interest priority for the third one. Significance level of 5% was used in testing the hypothesis.

The results showed as follows: (1) The customers' attitudes toward the
