Yogyakarta
2006**

Tujuan penelitian ini adalah untuk mengetahui (1) pengaruh sikap mental terhadap minat siswa SMK untuk berwiraswasta, (2) pengaruh prestasi belajar terhadap minat siswa SMK untuk berwiraswasta, (3) pengaruh lingkungan keluarga terhadap minat siswa SMK untuk berwiraswasta, (4) pengaruh jenis pekerjaan orang tua terhadap minat siswa SMK untuk berwiraswasta.

Penelitian ini dilaksanakan di SMK Ma'arif 2 Sleman dan SMK Karya Rini Sleman, pada bulan Agustus 2006. Populasi dalam penelitian ini adalah seluruh siswa kelas III sebanyak 141 orang siswa kelas III jurusan tata busana. Teknik pengambilan sampel dengan menggunakan *purposive sampling*. Teknik pengumpulan data dengan menggunakan kuesioner, wawancara dan observasi. Data penelitian dianalisis dengan menggunakan teknik analisis Chi Kuadrat dilanjutkan Koefisien Kontingensi.

ABSTRACT

FACTORS THAT INFLUENCE THE ENTREPRENEURIAL INTEREST OF VOCATIONAL HIGH SCHOOL "SMK" STUDENTS

(A Case Study on the 3rd Grade Students Majoring in Dressmaking in "SMK Ma'arif 2 Sleman" and "SMK Karya Rini Sleman")

This study aimed at finding out the influences of (1) mental attitude (2) learning achievement, (3) family background, and (4) parent occupational type on the entrepreneurial interest of "SMK" students.

It was carried out in "SMK Ma'arif 2 Sleman" and "SMK Karya Rini Sleman" in August 2006. The study population consisted of 141 students at 3rd grade and the study samples were 102 students majoring in dressmaking. The samples were selected using purposive random sampling technique. The data were collected using interview, observation and documentation techniques. Data were first analyzed using the Chi Square technique and then by the Contingency Coefficient technique.

The results of study indicated that: (1) there was an influence of mental attitude on the entrepreneurial interest of students ($\chi^2_{\text{count}} = 9.5572 > \chi^2_{\text{table}} = 3.841$ at $\alpha = 0.05$), (2) there was an influence of learning achievement on the entrepreneurial interest of students ($\chi^2_{\text{count}} = 12.112 > \chi^2_{\text{table}} = 3.841$ at $\alpha = 0.05$), (3) there was an influence of family background on the entrepreneurial interest of students ($\chi^2_{\text{count}} = 10.225 > \chi^2_{\text{table}} = 3.841$ at $\alpha = 0.05$), and (4) there was an influence of parent occupational type on the entrepreneurial interest of students ($\chi^2_{\text{count}} = 10.225 > \chi^2_{\text{table}} = 3.841$ at $\alpha = 0.05$).
