

## ABSTRAK

Nila, Franciska. 2013. *Pembelajaran PKn Dengan Model Pembelajaran Kooperatif Untuk Meningkatkan Kesadaran Akan Nilai Cinta Tanah Air Kelas III SDN Adisucipto 1*. Yogyakarta: Universitas Sanata Dharma.

Kata kunci : Mata Pelajaran PKn, kooperatif teknik mencari pasangan, nilai cinta tanah air.

Penelitian ini bertujuan untuk mengetahui peningkatan kesadaran akan nilai cinta tanah air menggunakan model pembelajaran kooperatif teknik mencari pasangan pada siswa kelas III SDN Adisucipto 1 Tahun Ajaran 2012/2013.

Jenis penelitian yang digunakan adalah penelitian eksperimental tipe *non-equivalent control design*, subyek penelitian adalah kelas IIIA SDN Adisucipto 1 (kelompok kontrol) dan siswa kelas IIIB SDN Adisucipto 1 (kelompok eksperimen). Pengumpulan data dilakukan dengan memberi kuesioner sebagai *pretest* dan *posttest*, dan diolah menggunakan program *SPSS 20 For Windows* dengan menggunakan tiga tahap untuk kedua kelompok, yaitu :1) uji homogenitas skor *pretest*, 2) uji kenaikan skor *pretest* ke *posttest* baik kelompok kontrol maupun kelompok eksperimen, dan 3) uji perbandingan *posttest*.

Hasil penelitian menunjukkan bahwa model pembelajaran kooperatif teknik mencari pasangan berpengaruh secara signifikan terhadap kesadaran siswa akan nilai cinta tanah air. Hal ini ditunjukkan dengan harga *sig (2 tailed) > 0,05* yaitu 0,440 untuk kelompok kontrol dan harga *sig (2-tailed) < 0,005* yaitu 0,000 untuk kelompok eksperimen. Sehingga  $H_{null}$  ditolak dan  $H_i$  diterima dengan kata lain model kooperatif berpengaruh secara signifikan terhadap kesadaran siswa akan nilai cinta tanah air.

**ABSTRACT**

**Nila, Franciska. 2013.** *Civics Learning Using Cooperative Learning Model Make-a-Match Technique to Improve the Awareness of Loving the Country Value in the Third Grade of Adisucipto 1 Elementary School.* Yogyakarta: Sanata Dharma University.

Keywords: civics subject, cooperative technique to search, patriotism value.

This research aimed at knowing the increasing of the awareness of loving the country value using cooperative learning model make-a-match technique in the students of the third grade of Adisucipto 1 elementary school in 2012/2013 academic year.

This research was an experimental research non-equivalent control design type. The subjects of the research were students of class IIIA of Adisucipto 1 Public Elementary School (control group) and IIIB (experimental group). The data was gathered by giving pretest and posttest questionnaires. The data was processed using SPSS 20 for Windows program and it consisted of three steps for each group, namely: 1) Pretest differences test, 2) Posttest differences test, and 3) The increasing pretest and posttest score test.

The result of the research showed that the cooperative learning model make-a-match technique had a significant effect on the increasing of the awareness of loving the country value. It could be seen from the price of *Sig. (2-tailed)* for the control group which was 0.440 or  $>0.05$ , so that  $H_{null}$  was accepted and  $H_i$  was rejected. It meant that there was no significant difference between pretest and posttest score in the control group. In other words, there was no significant increase from pretest to posttest scores in the control group. Meanwhile, the price of *sig. (2-tailed)* for the experimental group was 0.000 or  $<0.05$ , so that  $H_{null}$  was rejected and  $H_i$  was accepted. It meant there was a significant difference between pretest and posttest score in the experimental group. In other words, there was a significant increase from pretest to posttest scores in the experimental group.
